class revamp.DataPreperation

Transform(*X, cleansing_step*)

Instantiate data preparation.

Method Transform will accept data frame (X) and cleansing_step(missing_values, encoding, one_hot_encoding, scaling, and all) as arguments.

Parameters

- **X** – DataFrame.
- **cleansing_step** – Operations(missing_value_imputation, encoding, one_hot_encoding, scaling, all).

1.1 Welcome to Revamp's documentation!

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
